

Errors in Project 3

1. Allows the user to enter numbers for name and breed (not doubles)
 - a. This does not create an error in the program, but it is not a realistic answer
2. User cannot enter Strings into the ageField
 - a. Creates runtime error
3. There are no bounds on age, you can have a dog that's over a thousand years old
 - a. Also no actual error in the program, but again not realistic
4. Special characters are not allowed in name, breed, and age
 - a. This is a runtime error, it will not allow the user to submit changes
5. User can't use a double for age, only integers
 - a. Also a runtime error, and will not allow the user to submit changes
6. Make sure no textFields are empty, otherwise it will cause a runtime error

Format part:

7. Make it so that the user must use a capital letter for the Name and Breed
